INTRODUCTION

Montana's Industry and Occupational Employment Outlook 1986-1995 provides projections on the State's industry and occupational employment trends. The information contained in this report can be very useful to:

Students and jobseekers attempting to make career decisions.

Education and job counselors advising people on career choices.

Educators in determining needs for, and content and structure of, the training programs that they offer.

Public and private employers in their attempts to make intelligent business decisions.

Any questions, comments or suggestions relating to this publication are welcomed.

METHODOLOGY

Industry Employment

The industry classification system being used in this report is based on the federal government's Standard Industrial Classification (SIC) Manual which is a classification system that has been developed to define industries by the type of activity in which they are engaged in accordance with the composition and structure of the economy.

Historical employment, by industry, was taken from the Employment and Earnings reports (ES-202 system). Where incomplete, the ES-202 data was supplemented by the Current Employment Statistics (CES) program. Annual average employment was generally used.

Industry Employment Projections

Using 1986 as the base year, much of the projected industry employment was established by using linear regression modeling or shift and share analysis. Input from economists and personnel specialists in government and private business was also taken into consideration.

Industry employment projections are for non-farm wage and salary workers only. Wage and salary employment, sometimes known as establishment-based employment, does not include all jobs in the labor market. Not included would be self-employed, owners and partners of unincorporated businesses, persons working in small agricultural operations, unpaid family members, workers on straight commission, some elected officials and domestic employees.

Employment by Occupation

The main source of occupational information was the Occupational Employment Statistics (OES) program. This program surveys Montana's employers over a three-year period in order to develop estimated occupational employment by industry type. The data thus collected enables us to build an industry-occupational (I/O) matrix. This I/O matrix is a table arraying the occupational staffing patterns for each industry: i.e., the ratio of employment in each occupation within an industry to the total employment in that industry.

For purposes of this report, the OES survey results for 1984-6 were used to develop industry staffing patterns. Next, these staffing patterns were applied to the 1986 base year employment to develop a base year I/O matrix.

Projected Employment by Occupation

Projected employment by occupation is derived by applying the base year I/O matrix to the projected industry employment. However, before the I/O matrix is applied it must be modified to take into consideration those occupations that are expected to undergo technological or structural changes which will alter the staffing pattern of those industries that the occupations are found in.

This "change factor" has been developed by the Federal Bureau of Labor Statistics and was applied to the base year I/O matrix in order to arrive at an enhanced base year I/O matrix. This "enhanced" matrix then is what was applied to the projected industry employment.

Job Openings

This publication also provides, for each listed occupation, an estimate of the number of average annual job openings to occur. The number of job openings is further broken down into its component parts -- growth and separations.

Average annual job openings due to growth represent the number of new jobs that result from the projected change in industry employment between the base year and the projected year on an annual basis.

Job openings due to separations differ, however, in that they represent employers' replacement needs. These would be job vacancies that result from employee retirements or deaths. These figures are derived by applying precalculated separation rates supplied by the Federal Bureau of Labor Statistics to the previously determined projected employment.

Assumptions

These projections indicate what is likely to happen barring any changes from past trends. It is assumed that during the projected period our economy's institutional framework will not change radically. Also that there will be no major events such as a widespread, long-lasting energy shortage or a war which would significantly alter the industrial structure of our economy or its rate of economic growth. So too is it assumed that our current social, technological and scientific trends and the values that they place on work, education, income and leisure, will continue.

Limitation

The projections that were developed were based on historical employment trends which were assumed to continue into the future. Unexpected short-term economic fluctuations could not be taken into consideration when these projections were made. Therefore, the industrial and occupational projections may be too high or too low depending on economic conditions.

It also should be noted that using percentages to reflect changes in industrial or occupational employment can at times be misleading. If the base number being used is quite small, large percentage swings are possible. For instance an occupation may show a startling 100% growth rate, but in actuality may have only gone from a base employment of 10 to a projected employment of 20.

Finally, we wish to emphasize that while these projections are expressing specific numbers, it must be understood that limitations of the data and the risk that is inherent in economic forecasting preclude any claims of precision.

MONTANA'S INDUSTRY EMPLOYMENT

By 1995 Montana's industries are projected to employ 304,720 wage and salary workers. This represents an increase of 35,880, or 13.3%, from the base year of 1986. Although the annual rate of growth is slightly less than 1.5%, there undoubtedly will be years where Montana's employment growth exceeds or fails to achieve this annual growth rate.

Between the base year of 1986 and the projection year of 1995, Educational Services, Health Services, and Eating and Drinking Places (in that order) will again employ the most workers in Montana. Some industries in Montana are projected to lose employment. Those industries expected to have a decline in workers over this nine year span will be Membership Organizations, Railroad Transportation, and Manufacturing of Primary Metals. Also projected to lose employment would be Manufacturing of Fabricated Metal Products, Manufacturing of Petroleum and Coal Products, Manufacturing of Food and Kindred Products, Motion Pictures, Communications, Transportation by Pipe Lines, and Manufacturing of Leather Products.

Although the group of industries called "Services" will again employ the most workers in 1995, it is projected that the Construction industries will show the greatest percentage growth by showing a 22% improvement in their employment numbers between 1986 and 1995.

The smallest growth both in number of workers and percentage change in employment is projected to be in the Communications and Utilities industries.

MONTANA'S OCCUPATIONAL GROUPS

Although the occupational group of workers referred to as "Production, Construction, Operating, Maintenance, and Material Handling Occupations" will continue to employ the most workers in 1995, the growth in "Professional, Paraprofessional, Technical" and in "Service" occupations is noteworthy.

Both of these groups are projected to grow more rapidly, both in percentages and whole numbers, than the "Production, Operating, Maintenance" group of occupations. "Professional, Paraprofessional, Technical" is expected to add 10,490 new workers by the year 1995, and "Service" to add 8,060. This compares to "Production, Operating, Maintenance" growth of only 6,390.

The least amount of growth projected to occur between 1986 and 1995 is in the occupational group called "Agricultural, Forestry, Fishing and Related." Workers in this group comprise less than 2% of Montana's wage and salary jobs and are expected to add only about 280 new jobs to the State's economy by the year 1995.

MONTANA'S OCCUPATIONS

Between 1986 and 1995, wage and salary type occupations are projected to grow by 35,880 in Montana. On an annual basis this would amount to almost 4,000 new jobs being created per year over this nine year period.

Retail Salespersons are projected again to be the most common occupation in 1995, followed by Truck Drivers, Cashiers, Waiters/Waitresses, Bookkeeping/Accounting Clerks, and Secretaries (see table H1). The three largest declining occupations are expected to be Stenographers, Railroad Brake/Signal/Switch Operators, and Data Entry Keyers.

The occupations that are expected to have the most job openings (growth + separations) are Retail Salespersons, Janitors/Cleaners, Registered Nurses, Truck Drivers, and Cashiers (see table H3).

Registered Nurses are projected to be the largest growing occupation, increasing 1,883 workers between the years 1986 and 1995 (see table H2). On an annual basis, this amounts to 209 new jobs being created each year.

The occupation with the second largest number of new jobs is expected to be Cashiers with an increase of 1,410 workers by the year 1995.
